В таблице `userPositions` настройки для ролей задаются в полях `settings` и `jsettings`:

- settings - Используется для хранения настроек в формате JSON.
- jsettings - Позволяет использовать JSONata для задания условий, например, для применения настроек только для определенной версии продукта.

Пример записи из таблицы userPositions:

select title, settings, jsettings from "userPositions" up where up.title = 'Помощник розницы'

Введите SQL выражение чтобы отфильтровать результаты

	A-Z title	{ } settings	A-Z jsettings	Значение
1	Помощник розницы	{"warning": "@307", "userForm": 7, "buttonBar": "@117", "eventForm": 1, "dateRanges": "@90", "eventRules": "@36", "eventEditor": "@57", "dayTransform": "@71", "eventFilters": "@46", "placeFilters": "@131", "userTransform": "@35", "alertTransform": "@306", "eventTransform": "@60", "scheduleSchema": "@86", "legendTransform": "@26", "scheduleBindings": "@116", "dayPlaceTransform": "@114", "scheduleTransform": "@112", "staffRequestsForm": 37, "staffRequestsQuery": "@170", "staffRequestsFormat": "@280", "staffRequestsReport": "@292", "eventEditorTransform": "@30", "staffRequestsFilters": 61, "deletedEventTransform": "@42", "staffRequestsSettings": "@168", "staffRequestsNewEvents": "@138", "staffRequestsValidation": "@139", "staffRequestsUsersSelect": "@259", "staffRequestsFilterSchema": "@176", "staffRequestsReportFilters": 53}	\$merge([{"info": \$clientName, "infoTooltip": ""}])	Помощник розницы

## Приоритет настроек:

Настройки в `jsettings` имеют более высокий приоритет по сравнению с настройками в `settings`. Если для одной и той же настройки заданы разные идентификаторы в обеих таблицах, будет применена настройка из `jsettings`.

## Комбинирование настроек:

- Если в `jsettings` заданы настройки, они используются в первую очередь. Затем, если в `settings` есть другие настройки, они комбинируются с теми, которые уже определены в `jsettings`.
- Аналогично, если у роли установлены определенные настройки, а у пользователя есть дополнительные настройки, которые отсутствуют у роли, то применяются настройки роли плюс индивидуальные настройки пользователя. То же самое работает и наоборот.
- Если у пользователя и у роли задана настройка с одинаковым названием, но с разными идентификаторами, то будет использована настройка пользователя, и идентификатор роли не будет добавлен. Таким образом, приоритет остается за настройками пользователя.

## Правила добавления настроек:

При добавлении настроек в таблицу `settings` необходимо следовать определенным правилам форматирования:

- Если настройка не является настройкой формы или отчета:

Идентификатор настройки указывается в кавычках и предшествует знаком собачки (`@`), например:

```
"название_настройки": "@идентификатор"
```

Пример:

```
"warning": "@307"
```

- Если настройка является настройкой формы или отчета:

Идентификатор указывается сразу после двоеточия без кавычек и знака собачки, например:

"название\_настройки": идентификатор

Пример:

"userForm": 7
